

The Superior Planter

Our founder and his wife are avid gardeners. But a career spent engineering and manufacturing ventilation equipment constructed predominantly of metal has left him with a distaste for wood. So, when he reached the limit of his patience for replacing wood planters, he asked our engineers to design and build him something better. The result, our RhoBox metal planters, are far superior to wooden alternatives. That's why we're excited to introduce them.

Built to Last

Our RhoBox metal planters will stand the test of time far better than wood. The 20-gauge galvanized steel construction is harder than the hardest hardwood and resists moisture, rot, termites, fire, shovel blades, and just about any other threat imaginable. And since the steel in our planters is galvanized, corrosion and rust are not concerns either. Homeowners can anticipate being able to use these planters for a decade or more.

Visually Stunning and Customizable

Everyone has wood planters. Wood is pedestrian. On the other hand, RhoBox planters are anything but ordinary. All-metal construction is unique and eye-catching. And since they are modular, any number of combinations—including terraces and corners—are possible to meet each homeowner's unique requirements, functional and aesthetic.

Easily Installed

Building wood planters is a hassle. After the installation has been sized and a plan laid out, there is still the trip to the lumber yard, followed by measuring and cutting every board, drilling any number of screw holes, and screwing the whole apparatus together. And then, for many homeowners, the equipment needed for the project often goes underused once it's completed, an unattractive financial proposition to say the least. Our RhoBox planters prevent all that time and expense. Each unit comes ready for installation, which is straightforward and intuitive and does not require expensive woodworking equipment. And, as an ecommerce company with a decade's experience, we're experts in shipping products to the location most convenient for our customers—no more trips to the lumber yard!

Better for the Environment

Save a tree, buy a RhoBox. Believe it or not, metal is "greener" than wood. True, trees regrow, but only over a long period of time: Once a tree is cut, it takes decades for a sapling replanted in its place to grow large enough to supply lumber. In contrast, the steel in our planters can be recycled and reused many, many times over in that length of time. And since our products are manufactured in a facility run on solar power and utilizing advanced technologies that minimize waste, homeowners can rest assured they made the most environmentally conscious decision by choosing RhoBox planters over any other alternative.
